Rocephin (Ceftriazone)

Rocephin is an antibiotic used to treat Gonorrhea, a sexually transmitted disease. The treatment is a one dose injection.

Rocephin should not be used if:

- You are allergic to any cephalosporin or penicillin
- You are pregnant or breastfeeding
- You are taking anticoagulants or blood thinners
- You have a history of colitis or kidney disease
- You are taking seizure medications
- You are taking alcohol or alcohol containing products
- You have a bleeding problem.

Some side effects of Rocephin include:

- Rash
- Swelling at injection site
- Diarrhea

If you have swelling of the lips, tongue, face or tightness of the throat – **Go to an emergency room immediately.**
