

Isabella County Time of Transfer Environmental Health Impact

2018-2022 Cumulative Report

2,394

Onsite sewage treatment systems and drinking water wells evaluated.

72%

Of onsite sewage treatment systems were functioning properly.

77%

Of drinking water wells were designed, maintained, and providing safe water in adequate quantity.

31

Homes identified discharging untreated wastewater to stream, ditch, or field tile, representing approximately **3,394,500 to 5,091,750 gallons of wastewater a year no longer being discharged into our waterways.**

255

Homes with sewage surfacing, backing up, damaged septic tank, laundry or kitchen waste discharging on the ground surface.

71

Sewage disposal systems located less than 50 feet to a drinking water well or surface water. A minimum of 50 feet is the established standard to ensure bacteria and viruses are killed before they can contaminate our water.
